### BURMATEX

The innovative design team at carpet tile company Burmatex has developed Surface to meet the demand for flooring products that deliver on performance, durability and appearance, but that do not compromise a tight budget. Surface is a textured nylon loop carpet tile ideal for commercial interiors, compatible with Burmatex's existing portfolio and available in ten commercial colourways, from earthy tones through to cool neutrals.

### LUC SWEN

Luc Swen has designed the Tangram sofa to suit most environments with limited or large open areas. The sofa can be used in any combination with a four base or 3 back module like a Tangram, which is a Chinese geometric puzzle consisting of a square cut into seven pieces that can be arranged to make various other shapes.

### DAUPHIN

The new Riola range of executive conference chairs from Züco, a brand of Dauphin, is available as a cantilever chair or a swivel chair. The swivel chair's swivel joint is positioned not in the centre near the seat, as is usually the case, but directly above the four-legged, cross-type base which offers improved comfort for the user. The backrests and seats on both chairs can be fitted with a cover fabric, giving the chairs a physical, figurative appearance and at the same time, a relaxed feeling of lightness.

### GRADUS

Formerly the Exchange Tower and home of the London Stock Exchange, 125 Old Broad Street has recently undergone a complete refurbishment. Gradus supplied primary barrier matting from its Esplanade Plus range in a bespoke circular design for the building's main entrances. Suitable for interior or exterior locations, the matting was specified with Tern (dark grey) wipers from the Boulevard 5000 range to help disguise dirt and marks. By preventing soil and moisture from being carried into the building, the matting maintains the appearance of the lobby flooring, reduces cleaning and maintenance costs, and improves safety by reducing the risk of slip accidents caused by wet or soiled floors.

### ANTRON

Antron carpet fibre announced a new sustainability framework, focusing on the lasting performance of products as a key factor of sustainability. High quality, durable carpets lead to fewer carpet replacements, which in turn benefit the environment by conserving resources and reducing waste. The framework aims to convey to architects and decision-makers, that durable, long-lasting carpet begins with the yarn itself and Antron fulfils this in three ways with carpet performance, enduring materials and a carpet reclamation program.
